## Scrapy Project

# Multi-Class Text Classification with Scikit-Learn

#### Introduction

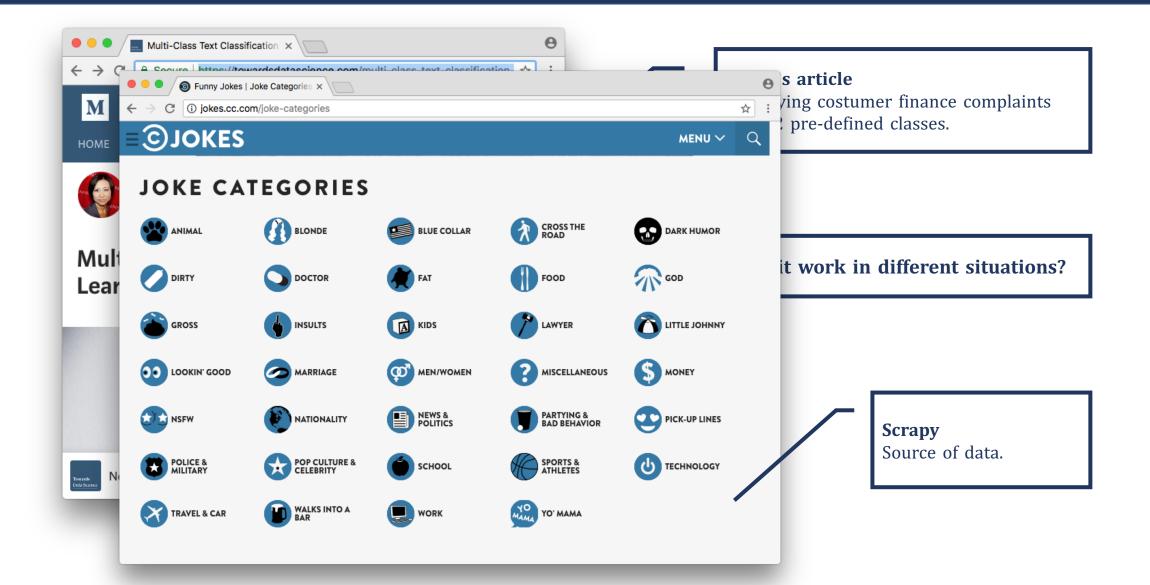

#### Susan's article

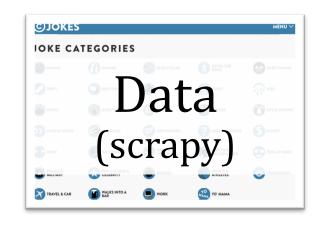

Classifying costumer finance complaints into 12 pre-defined classes.

Does it work in different situations?

#### Introduction

#### Steps

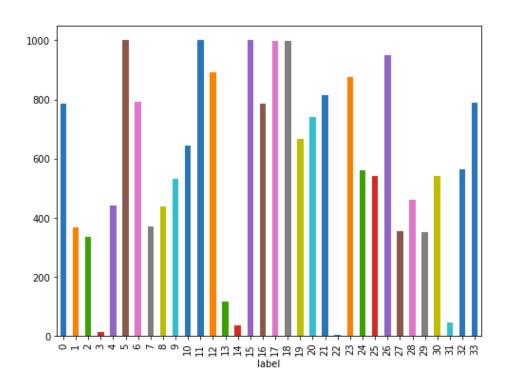

Logistic Regression

#### 34 Imbalanced Classes

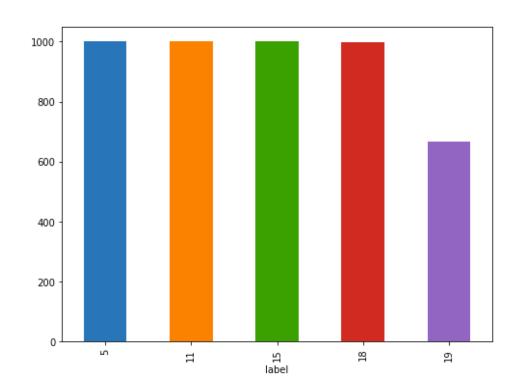

#### Accuracy

| Model                  | Train | Test* |
|------------------------|-------|-------|
| Naive Bayes Classifier | 39%   | 17%   |
| Random Forest          | 30%   | 15%   |
| Logistic Regression    | 43%   | 18%   |

<sup>\*</sup> Test size: 20%

### 5 Balanced Classes

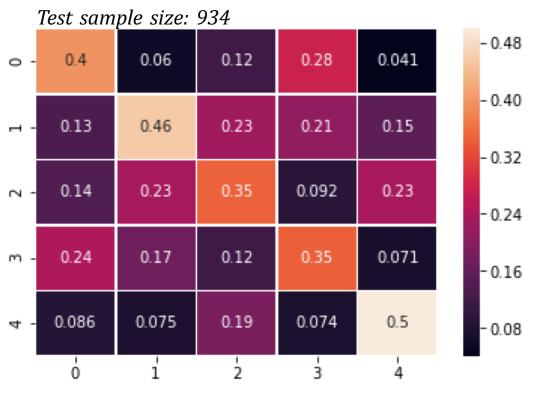

#### Accuracy

| Model                  | Train | Test* |
|------------------------|-------|-------|
| Naive Bayes Classifier | 60%   | 38%   |
| Random Forest          | 61%   | 35%   |
| Logistic Regression    | 65%   | 39%   |

<sup>\*</sup> Test size: 20%

#### 5 Balanced Classes

| 0 | dirty         |
|---|---------------|
| 1 | insults       |
| 2 | lookingood    |
| 3 | miscellaneous |
| 5 | money         |

#### Accuracy

| Model                  | Train | Test* |
|------------------------|-------|-------|
| Naive Bayes Classifier | 60%   | 38%   |
| Random Forest          | 61%   | 35%   |
| Logistic Regression    | 65%   | 39%   |

<sup>\*</sup> Test size: 20%

#### Improvements

Tuning the models parameters properly (GridSearchCV);

• Finding the appropriate metrics to compare the model's performance.
